💡 Lab Exercise: Booking Form (HTML + JavaScript)

Objective:

Create a booking form that allows users to select a service, pick a date and time, and submit the booking.

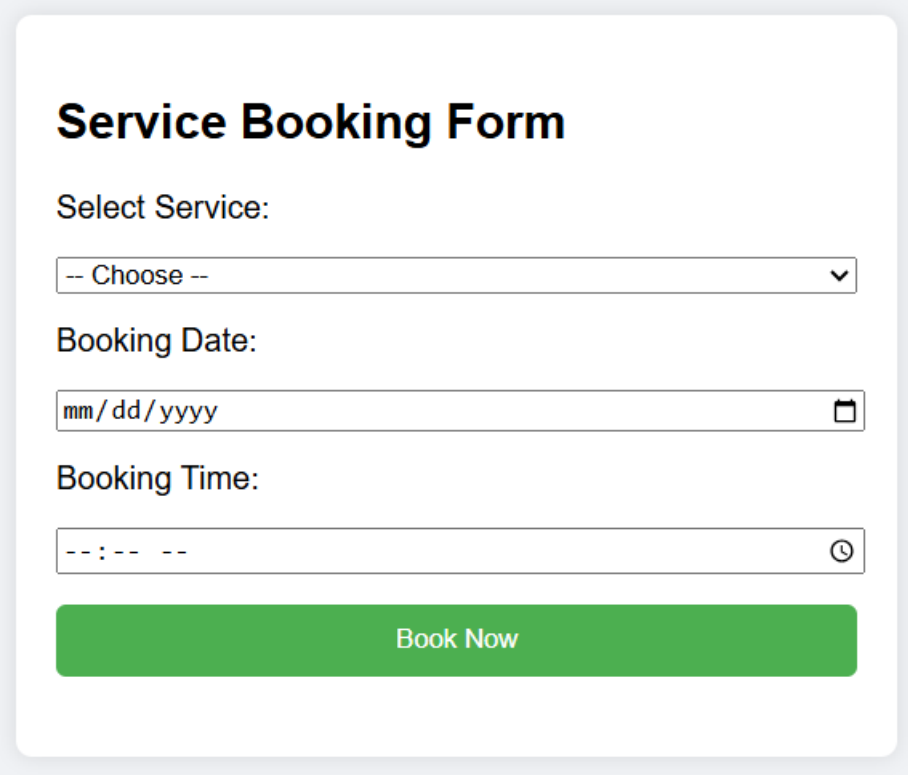

📝 Instructions:

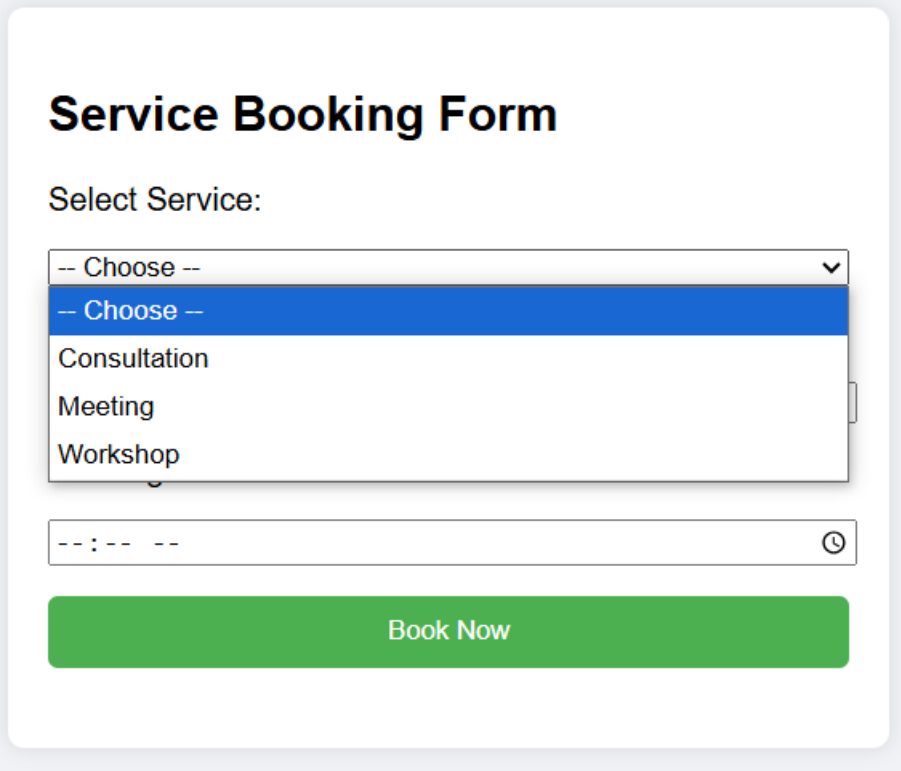

1. Create a web form with the following fields:
    - A dropdown to select a service (e.g., Consultation, Meeting, Workshop).
    - A date picker to select a booking date.
    - A time picker for selecting the booking time.
    - A submit button.
2. Validate the form with JavaScript to ensure:
    - All fields are filled.
    - The selected date is not in the past.
3. Display a confirmation message showing the booking details after successful submission.
4. Use simple CSS to make the form visually clear and easy to use.

✅ Expected Output Behavior:

- If any field is empty or the selected date is before today, show an alert.
- If all validations pass, display a confirmation message such as:

```
"Booking confirmed for Consultation on 2025-04-26 at 10:00 AM."
```
